

## ULTRA RUGGED MOBILITY TAKES PUBLIC SAFETY TO A NEW LEVEL

### Key Features Reduce Down Time and Improve Accuracy

**HORSHAM, PENNSYLVANIA, October 2, 2013** – Extreme weather conditions and demanding environments no longer need to be limitations for data collection in the Public Safety sector. United Public Safety® announced the introduction of the [N4CER](#) today. The N4CER is the first in a series of ultra-rugged devices specifically designed for Public Safety; parking enforcement officers, police officers, fire marshals and building inspectors can finally issue tickets and citations, respond to, and send critical information efficiently in the harshest weather conditions.

The N4CER features a 5.5 inch diagonal high resolution 720 X 1280 Super AMOLED display, powerful Android™ version 4.1.2 (Jelly Bean) as well as a 70 Key, backlit keypad. Other key features include a hot-swappable battery and a 3 channel magnetic stripe reader. A drop-in cradle with spare battery charger may be used for desktop or vehicle mounting. The device is IP67 rated and meets or exceeds MIL-STD 810G using methods 516.6 and method 514.6 for both shock and vibration.

The N4CER has a keypad designed specifically for Law Enforcement and Public Safety. The keypad can directly execute applications or other features while operating other programs. As an example, an officer can record a conversation or take notes while running an unrelated application. The N4 is designed to execute critical functions regardless of the primary application. A very special feature of the N4 is an ALERT button that can be programmed to send an SMS text message while running an unrelated application or no application at all.

Moreover, the N4CER is designed to limit potential disputes. The 8MP color camera, combined with United Public Safety software, allows enforcement officers to take crystal clear pictures of violations to include on tickets and citations, and the backlit 70-key keypad increases accuracy of typing when inputting information. All of this information can be stored on the N4CER's 16GB internal memory and Optional MicroSD with up to 64GB of additional memory.

United Public Safety®, a Two Technologies company, is headquartered in Suburban Philadelphia. United Public Safety provides a full spectrum of all-inclusive electronic parking and ticketing solutions for municipalities, campuses, corporations, hospitals and property compliance management. Our ToCite and ForCite solutions are driving electronic enforcement innovation into the 21st century.
